

Computer BIOS Settings

The Computer Bios settings for the Parallel port must be set correctly in order for the Coin Inputs and Operator buttons to work correctly with the Joshua OS. If you run into a problem with the both Coin Inputs and Operator buttons not working, use the PS/2 keyboard provided with your cabinet to verify the Bios setting on your computer are set correctly.

1. While the computer is powered off, plug the PS/2 Keyboard into the purple colored PS/2 port on the back of the computer.
2. Next power the computer ON, and during the first boot-up screen showing the CPU speed and memory hit the Delete Key on the keyboard to enter the Bios Setup Menu.
3. Use the arrows keys to scroll down and highlight **Integrated Peripherals**, press the Enter button to enter this menu.
4. At the Integrated Peripherals Menu screen us the arrow keys to scroll down the long list of available options until you find **Parallel Port Mode** and **EPP Select Mode**. Use the Page Up and Page Down keys next to the number pad to scroll through and change each option.
5. Verify and/or change the **Parallel Port Mode** to **EPP** and **EPP Select Mode** to **EPP 1.7** when you are finished press the F10 Key to Exit and Save the new Bios Settings.
6. You can now unplug the keyboard from the computer and reboot the computer to verify the Coin Inputs and Operator buttons are working correctly.
