

Installing a Video Card Support Bracket

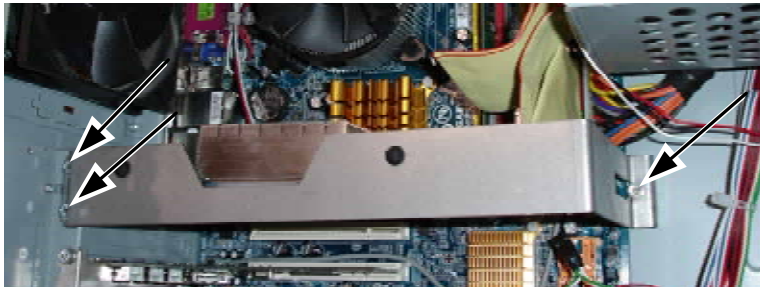

Step 1: Install Rubber Spacers into holes in Bracket.

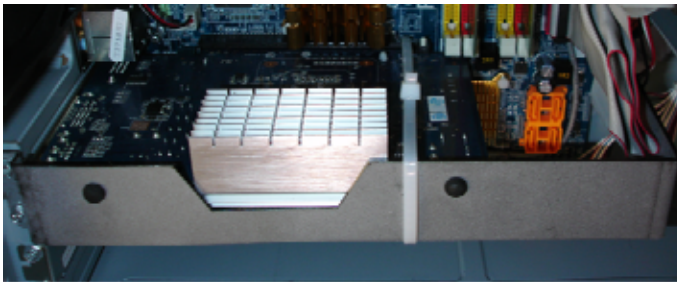

Step 2: Remove the two screws shown by arrows below.
(Leave the video card and cover plate in place.)

Step 3: Place bracket so plastic spacers are against video card.
Re-install the two screws removed previously, and install another case screw in the threaded stud, as shown by the arrows below.

Step 4: Secure a cable tie around the card and under the slot, as shown below.

Note: If you need a case screw, you can take one of the screws securing the side panel that is still in place, as shown by the arrows above.
