Perform the Following Checks Before Upgrading your System

Installing new software will not fix existing hardware problems. Refer to your Upgrade Instructions and check the items listed below before the upgrade. Re-check applicable items after the upgrade to verify proper operation. See Common Repairs document for repair steps.

Check Item	Before Upgrade	After Upgrade
Leader light, START button, and brake lights work		
Control panel buttons and E-brake work and light		
Steering and feedback work (check pot values)		
Gas and brake work (check pot values)		
6-speed shifter works in all gears, if installed		
Card reader works, if installed		
Card dispenser works, if installed		
Both coin mechs, bill validator (if installed) and coin meter work		
Speakers work and sound comes from correct speakers		
Monitor image is bright and clear		
Cabinets link properly		
Cabinet interior is clean		--
Steering belt and gears are adjusted and not worn		--
Cabinet fans work and air vents are clear		
Components inside PC cleaned and checked		--
PC fans work (case front, power supply, and CPU)		--
Wire connections and ground wires are secure		--
Dual force-feedback PCBs have ESD Shock Fix		--
Force-feedback PCB connects directly to PCI USB port		--
Cabinet exterior is clean and screws are secure		--
