

Monitor and Sintra Marquee Installation for Twisted — Nitro Stunt Racing

Document Part #: 040-0273-01 Rev. B

Your cabinet has a new design with a Sintra Marquee and stand-alone TV monitor. This document describes how to install the monitor and marquee. Follow the instructions in your *Operation and Service Manual* to install the seat and set up your cabinet.

Important: Installing the Monitor and Sintra Marquee is a two-person job.

Install the Monitor

Note: For some configurations the monitor is already installed.

1. Disconnect the cabinet from AC power and remove the monitor from its packaging.
2. Position the monitor and connect the AC power and DVI cables from the cabinet to the monitor.
3. With a second person supporting the monitor, install the four (4) monitor mounting bolts from inside the cabinet.

Install the Sintra Marquee

The Sintra Marquee assembly is made up of two pieces, the Marquee/Bezel and the Logo. The Logo is pre-installed on the Marquee/Bezel at the factory.

Refer to the picture below and note the seven (7) mounting screw locations shown by circles. Do the following steps:

1. Position the Marquee Assembly over the back of the cabinet, with the logo facing the front above the monitor.
2. While a second person supports the Marquee Assembly, secure it to the cabinet with the seven (7) $\frac{1}{4}$ -20 x $\frac{3}{4}$ " screws with flat washers provided. The screws mate with T-nuts in the cabinet.

When the cabinet is powered on, the LED light strips installed on the cabinet will shine on the marquee.
