Rebooting Issue with Breeders' Cup cabinets

The Breeders' Cup software version 1.0.5 and higher comes with a movie Media Manager menu under the Test Menus in the game software. The Media Manager menu is designed to allow the operator to pick and choose which movie he would like to have displayed during the attract mode sequence of the game.

We have had some Operators recently reporting rebooting issues with their cabinets. This error is caused by turning all the movies to OFF under Media Manager menu.

To resolve this problem always make sure at least 2 movies are set to ON under the Media Manager. By Factory Default the first 2 movies listed in the Media Manager are set to ON
