## Breeders' Cup – Quick Race 2-Player Game

Breeders' Cup software version 1.6.0 now has the ability to support a 2-Player Quick Race game on a single Breeders' Cup cabinet. Players are allowed to insert their own racehorse cards to challenge others without adding a race to their racehorse card. This new and easy Quick Race challenge is sure to become a fast favorite for operators and their locations that enjoy running local competitive events.

Cabinets released prior to May 15, 2005 (REV 4 or earlier) do not have HOLD and WHIP buttons for a second player. Player 2 must use the left and right arrow buttons adjacent to the SELECT button in order to **HOLD** and **WHIP** their horse in the game. You will need to go into the Operator menu to configure the cabinet for the 2-player feature. Select CABINET SETUP and then move the cursor to the field CABINET TYPE. Use the left or right arrow button to change the value to SINGLE WHIP/HOLD. The Arrow buttons will now work for Player 2.

Breeders' Cup REV 5 cabinets include a second set of HOLD and WHIP buttons for Player 2. The default settings in the Operator Menu under Cabinet Setup are for a Dual WHIP/HOLD cabinet. You do not need to change the any menu settings for a REV 5 cabinet.

Contact UltraCade Technologies technical support group if your Breeders' Cup game requires a software update. Please be ready to provide the hard disk drive serial number (HD#) of the Breeders' Cup game to be updated. The HD# is listed at the bottom of the screen on the main page of the **Operator Setup** menu.
